## ABOUT OUR COMPANY

Cedar Solar specialises in solar energy systems and solar water pumping solutions. Cedar Solar was established in 2010. The aim was to help the agricultural sector reduce operational costs by taking advantage of renewable energy. The initial product research and development was completed in Namibia. The result was a DC water pump range that is reliable, affordable and works well in African conditions. Following initial successes in Namibia, we opened a South African office in Johannesburg. Since then we have developed an extensive network of independent resellers to service the whole of Southern Africa and established ourselves as an important player in the solar water pump market.

In 2016 we also added a solar energy division focused on rooftop PV systems. We have a team that manages installations in Johannesburg. In the rest of Southern Africa, we rely on our network of 80+ independent resellers & installers.

## WHY CHOOSE US

We are well established with 10 years of solar experience. We only use reliable solar hardware with great performance guarantees. Our knowledgeable technical team guides clients from initial system design through to installation and maintenance. We simplify the process of switching to solar for our customers and ensure that the results meet their initial expectations.

## OUR TEAM

# SOLAR WATER PUMPS

We offer a solar pumping solution for every borehole. Our entry level range is the Spitfire Econo range for small-scale farming and domestic use. Our flagship range is the Cedar Pumps range that is geared towards commercial farmers. This range boasts a three year warranty. The MultiFlow AC/DC Hybrid range works with AC and DC power sources which offers more flexibility to users.

For larger projects we opt for the VEICHI pump drive system. If you need 5000 liters or 500 000 liters per day we have a solar water pumping solution that can do the job. Our in-house team have developed an APP that sizes solar water pumps extremely accurately, using your borehole variables and historical weather data in the area.

# SOLAR ENERGY SYSTEMS

We provide various PV solutions for the residential, commercial and the agricultural sectors. Our tried-and-tested process establishes exactly what your energy needs are, and we design and deliver a suitable system that is custom built based on your energy consumption. We are currently distributors of Victron hardware.

Our solutions include:

- Off Grid Solar
- On-Grid Solar (Grid-Tied)
- Hybrid Solar (ESS)
- Backup Systems (Load Shedding Solution)

## COMPANY ACHIEVEMENTS

10 YEARS IN BUSINESS

12 000+ RUNNING SOLAR PUMP SYSTEMS

14 EMPLOYEES IN SA & 5 IN NAMIBIA

4 MEGAWATTS INSTALLED

35 000 TONS OF CO<sub>2</sub> OFFSET

18 AFRICAN COUNTRIES SERVED
